April 2, 2020

08:00-09:00  Registration and Continental Breakfast
09:00-09:10  Introduction

Stephanie Stepp, PhD, NASSPD President, University of Pittsburgh

9:10-12:30  Transference-Focused Psychotherapy for Working with Patients with Borderline and Narcissistic Personality Features

Kenneth Levy, PhD, Pennsylvania State University

Transference-Focused Psychotherapy (TFP) is a comprehensive and ambitious evidence-based treatment for patients with severe personality disorders such as BPD and NPD. TFP is a modified and manualized treatment based on Otto Kernberg and colleagues’ writings on object relations theory. Its efficacy has been demonstrated in multiple studies, both regarding symptom change and changes in personality structure and is comparable with other treatments. While based in the psychodynamic tradition, the treatment has important modifications making it of use to general clinicians today working with patients with significant personality disorder pathology. This presentation will avoid jargon and focus on experience-near language meant to resonate with the attendees at all levels of experience and of various orientations. Clinical vignettes, role plays, and videotaped psychotherapy material will be used throughout. In addition, the research base for TFP will be reviewed.

By the end of the workshop, attendees will be able to explain essential elements TFP model, including: (1) assessment and providing feedback to the patient, (2) setting a collaborative treatment frame and goals, (3) dealing with challenges to the treatment frame and patient suicidality, (4) how to establish and maintain a non-judgmental stance, (5) dealing with intense affects in session, (6) recognizing transference patterns and differentiating the transference from the therapeutic alliance and the real relationship, (7) using one’s own reaction to the patient as information about the patient’s internal state and/or how the patient may affect others, (8) Clarifying the patient’s subjective experience; Tactfully bringing into awareness disparate aspects of the patient’s experience, and tactfully helping the patient understand the underlying dynamics that contribute to their experience of themselves and others; and (9) recognizing changes in the patient.
Working with Emotions in Dialectical Behavior Therapy
Shelley McMain PhD, CPsych, Centre for Addiction and Mental Health
University of Toronto

13:30-13:40  Introduction
  Stephanie Stepp, PhD, NASSPD President, University of Pittsburgh

13:40-17:00  Working with Emotions in Dialectical Behavior Therapy

In Dialectical Behavior Therapy (DBT), pervasive emotion dysregulation is theorized to underlie borderline personality disorder and related mental disorders. The effective delivery of DBT requires a focus on emotions and knowledge on how to work effectively with in-session emotions. Operating from a framework that emotions are central to the development and maintenance of problems and the process of change, this workshop explores how to monitor emotional arousal and recognize in-session markers of emotion processing problems. Dr. McMain will lay out principles and strategies to facilitate emotional awareness and acceptance as well as techniques to transform problematic emotional responses. Attention will be paid to the timing of interventions, when to activate emotion, and when to regulate unproductive and destructive emotions. By the end of this workshop, participants will be able to:

- Explain how DBT formulates problems in terms of emotion regulation.
- Recognize cues that characterize problematic patterns of emotion processing styles.
- Implement strategies to activate emotions and to regulate unproductive emotions.

Led by:
Shelley McMain, PhD, CPsych
Head, Borderline Personality Disorder Clinic
Clinical Scientist, Centre for Addiction and Mental Health
Associate Professor
Director, Psychotherapy, Humanities, and Psychosocial Interventions (PHPI) Division,
Department of Psychiatry,
University of Toronto
Friday, April 3rd, 2020

07:30-08:45  Registration, Poster Setup, and Continental Breakfast
08:45-09:00  Opening Remarks
             Stephanie Stepp, PhD, NASSPD President, University of Pittsburgh
09:00-09:45  Plenary Session (Shelley McMain)
             Shelley McMain, PhD, Centre for Addiction and Mental Health
09:45-10:00  Break
10:00-11:15  Parallel Sessions

**What Works and Why? Mechanism-Focused Treatment of Borderline Personality Disorder**
*Chair: Julianne Wilner Tirpak, MA, Boston University*
*Discussant: Kim Gratz, PhD, University of Toledo*
